## Basic Skills

## Significant Figures

When taking measurements, we can only measure to a certain precision.
Ex. Using a ruler, you can measure something to be 4.5 cm . Saying you measured something that is 4.5368551 cm when using a ruler is impossible.

Rule: You can only measure to a certainty of $\qquad$ of the smallest increment. Every measurement will also have a degree of error (often follows the same rule of 10\%)

- Smallest increment is 1 mm . Can measure up to .01 mm
o The measurement is for sure greater than $\qquad$ but less than $\qquad$
o For sure greater than $\qquad$ but less than $\qquad$
- These first two numbers are $100 \%$ accurate

0 The last digit is the one that is $\qquad$ and is therefore the least accurate. This however, does not make it insignificant
0 Divide the segment between 0.8 and 0.9 into $\qquad$ segments and estimate the last digit.

- Let's say it is 2.8 $\qquad$
- The uncertainty of this value is $10 \%$ of the smallest division
- We would write it as $\qquad$
The rules for sig figs are:
- Any $\qquad$ number is significant
o $25.5 \rightarrow$ three sig figs
- Zeros at the beginning of a measurement are never significant
$0 \quad 0.027 \rightarrow$ two sig figs
- Zeros that are $\qquad$ between significant digits are significant
$0 \quad 2.07 \rightarrow$ three sig figs
- Zeros at the end of a number are only significant if there is a $\qquad$ place $0 \quad 200 \rightarrow$ minimum 1 sig fig
- $2 \times 10^{2} \rightarrow 1$ sig fig (most likely)
- $2.0 \times 10^{2} \rightarrow 2$ sig figs
o $200.0 \rightarrow$ four sig figs
- Whole numbers have unlimited amount of significant figures

Trick: When dealing with zeros, change the number into scientific notation.

## Basic Skills

## Adding and Subtracting Significant Figures

The sum or difference cannot be more precise than the $\qquad$ precise measurement.

## Ex. $2.711+3.2=5.911=5.9$

2.711 is precise to the thousandth decimal place while 3.2 is precise to the tenth, therefore our answer must be no more precise than the $\qquad$ decimal place.

## Multiplying and Dividing Significant Figures

The product or quotient must have the same number of sig figs as did the measurement that had the $\qquad$ number of sig figs.

Our answer can only have 2 sig figs because that is the fewest amount of measurements given.

Therefore the correct answer is $59 \mathrm{~m}^{2}$

## Multi-step Problems:

- When performing calculations with intermediate answers, keep at least one more sig fig than the final answer.
- In other words, only change your FINAL answer according the appropriate number of significant figures.

## Worksheet 1.3 - Significant Figures

1) Counting sig figs: write down the number of sig figs each piece of data has:
a) 0.0021 m
b) $200,000 \mathrm{~m}^{3}$
c) 21.200 s
d) 410 kg
e) 0.0002 s
f) $91.0001 \mathrm{~m}^{2}$
2) Multiplication with sig figs:
a) $92.45 \mathrm{~m} \cdot 1.01 \mathrm{~m}=$
b) $0.0024 \mathrm{~N} \cdot 4.24 \mathrm{~s}=$
c) $4000 \mathrm{~kg} \cdot 2.001 \mathrm{~m} / \mathrm{s}$
e) $0.00698 \mathrm{~m}^{2} \cdot 100 \mathrm{~cm}=$
f) $2001 \mathrm{~kg} \cdot 12.6 \mathrm{~m} / \mathrm{s}=$
g) $610 \mathrm{~N} \cdot 4002 \mathrm{~s}=$
3) Division with sig figs:
a) $12 \mathrm{~m} \div 31.2 \mathrm{~s}=$
b) $69.4 \mathrm{~kg} \div 38.888 \mathrm{~s}=$
c) $0.012 \mathrm{~m}^{2} \div 0.0002 \mathrm{~s}=$
d) $1800 \mathrm{~kg} \div 410 \mathrm{~s}=$
e) $0.102 \mathrm{~m} \div 100 \mathrm{~ms}=$
f) $1001 \mathrm{~m}^{3} \div 40 \mathrm{ks}=$
4) Addition and subtraction with sig figs:
a) $14 \mathrm{~m}+12.2 \mathrm{~m}=$
b) $0.012 \mathrm{~kg}+1.0046 \mathrm{~kg}-0.0064 \mathrm{~kg}=$
c) $12.46 \mathrm{~kg}+9.82 \mathrm{~kg}-6.666 \mathrm{~kg}=$
d) $69.45 \mathrm{~s}+19.3 \mathrm{~s}=$
e) $200.1 m-128.28 m=$
5) Chain calcs with sig figs: round off to the appropriate number of sig figs at the end!
a) $(0.045 \mathrm{~m} \cdot 9.92 \mathrm{~kg}) \div 16.86 \mathrm{~s}=$
b) $(9000 \mathrm{~m} \cdot 4.01 \mathrm{~m}) \cdot 1.002 \mathrm{~m}=$
c) $(0.21 \mathrm{~m} \cdot 6.23 \mathrm{~s}) \cdot 1.002 \mathrm{~m}=$
d) $(18.01 \mathrm{~m} \cdot 0.41 \mathrm{~m}) \div(14.62 \mathrm{~kg} \cdot 12 \mathrm{~s})=$

## Unit 1: Basic Skills

## Lesson 1 - Measurement and Scientific Notation

- Measurements in physics are carried out in $\qquad$ units; aka, the
- The size of the measurements can be expressed using $\qquad$ . (ex. km vs. m)

| Measurement | Unit | Symbol |
| :---: | :--- | :--- |
| Length |  |  |
| Mass |  |  |
| Time |  |  |
| Speed |  |  |
| Acceleration |  |  |
| Force |  |  |
| Energy |  |  |

| Prefix | Symbol | Factor |
| :---: | :---: | :---: |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |

## Converting Units:

Long way:
Single Step:

## Short Way:

1: Find the $\qquad$

2: Find the $\qquad$ of each prefix.

3: Use the $\qquad$
$\qquad$ !

## Ex.

1) Convert 165 mm to m
2) Convert 380 cg to mg
3) Convert $24 \mathrm{~m} / \mathrm{s}$ to $\mathrm{km} / \mathrm{h}$
4) Convert 24 ML to mL

When converting between $\mathrm{m} / \mathrm{s}$ and $\mathrm{km} / \mathrm{h}$ remember the magic number:

Scientific Notation:
Ex:
$32000000 \rightarrow$
$0.00000436 \rightarrow$

- Move the decimal point until only...
- The \# of spaces moved is the...
- Move left and the exponent is $\qquad$
-Move right and the exponent is $\qquad$

3. Compute the following:
a) $10^{3} \times 10^{5}$
b) $4 \times 10^{-3} \times 5 \times 10^{-5}$
c) $10^{-3} \times 10^{5}$
d) $\left(8.0 \times 10^{5}\right)\left(1.2 \times 10^{8}\right)$
e) $10^{3} \div 10^{5}$
f) $\left(2.3 \times 10^{-3}\right) \div\left(1.0 \times 10^{-5}\right)$
g) $10^{-3} \div 10^{5}$
h) $\left(3 \times 10^{8}\right)^{2}$

## 2 - Algebra

- Often in physics, you will be given a formula. You need to be able to manipulate these formulae.

Ex:

1. Solve for " $a$ " $\rightarrow \mathrm{F}=\mathrm{ma} \quad$ 2. Solve for " t " $\rightarrow \mathrm{v}=\mathrm{d} / \mathrm{t}$
2. Solve for " $c$ " $\rightarrow E=m c^{2}$
3. Solve for " $d$ " $\rightarrow v^{2}=u^{2}+2 a d$

- Once you can manipulate formulae, you can plug in numbers.

Ex:

1. Solve for " $d$ " given that $v=d / t$

- $v=36 \mathrm{~m} / \mathrm{s}$ and $\mathrm{t}=8.0 \mathrm{~s}$

2. Solve for " $m$ " given that $F=m a$

- $F=150 \mathrm{~N}$ and $\mathrm{a}=2.50 \mathrm{~m} / \mathrm{s}^{2}$

## Trigonometry

- Pythagorean Theorem

## Ex. Solve the Triangle

Trig Ratios

Draw Diagrams. Show work. Round off all answers to one decimal place.

1. The angle of elevation of the summit from the bottom of the lift at Snow Bowl is $33^{\circ}$. If a skier rides 1000 m on this lift to the summit, what is the vertical distance between the bottom of the lift and the summit?
2. The angle of depression (below the horizontal) of an aircraft carrier from an approaching airplane is $52.2^{\circ}$. If the plane is 700 m above level of the deck of the carrier, how far away is the plane from the carrier?
3. The navigator on a bomber finds that the angle of depression of a target 4.00 km away is $11.4^{\circ}$. At what altitude is the plane flying?
4. Billy's kite has a string 40 m long and is flying 27 m above his eye level. Find the angle of elevation of the kite.
5. At an airport, cars drive down a ramp 96 m long to reach the lower level baggage-claim area 13 m below the main level. What angle does the ramp make with the ground at the lower level?
6. A pendulum 40 cm long is moved $30^{\circ}$ from the vertical. How high is the lower end of the pendulum lifted?

Bonus: The angle of depression of the top of Billings Building from the roof of the Wolcott Building (in the same vertical plane) is $33.10^{\circ}$, and from the $15^{\text {th }}$ floor it is $21.50^{\circ}$. If the distance between the roof and the $15^{\text {th }}$ floor is 101 m , how far apart are the buildings?

## Basic Skills

## Solving Equations

Evaluate the following using the information given. Try algebraically solving for the unknown first.

1. $v_{f}=v_{i}+a t$ (find a, if $v_{i}=2, v_{f}=16, t=2$ )
2. $F=\frac{m v^{2}}{r}$ (find r , if $F=10, m=5, v=4$ )
3. $T=2 \pi \sqrt{\frac{m}{k}}($ find m , if $T=3, k=50)$
4. $\frac{P_{1}{ }^{2}}{d_{1}{ }^{3}}=\frac{P_{2}{ }^{2}}{d_{2}{ }^{3}}$ (find $d_{2}$, if $P_{1}=10, P_{2}=8, d_{1}=2$ )
5. $\frac{1}{f}=\frac{1}{d_{o}}+\frac{1}{d_{i}}\left(\right.$ find $d_{o}$, if $\left.d_{i}=20, f=12\right)$
6. $d=v_{o} t+1 / 2 a t^{2}\left(\right.$ find t , if $\left.v_{i}=0, d=125, a=10\right)$

Solve the following word problems using the information and steps (I, II, III) provided.
7. If an airplane travels at $120 \mathrm{~m} / \mathrm{s}(\mathrm{v})$, how long would it take ( t$)$ for the plane to travel a distance (d) of 300 m ?
I. List givens

| $v=$ |
| :--- |
| $d=$ |
| $t=$ |

Concept Equation: $v=\frac{d}{t}$
II. Derive Equation (solve for $t$ )
II. Substitute the given values (I) into your derived equation (II) and solve.

## Basic Skills

8. A toy car accelerates from an initial velocity $\left(v_{i}\right)$ of $5 \mathrm{~m} / \mathrm{s}$, to a final velocity $\left(v_{f}\right)$ of $17 \mathrm{~m} / \mathrm{s}$, in 6 seconds ( t ). Find the acceleration of the car.

Concept Equation: $v_{f}=v_{i}+a t$

## Worksheet 1.2 Algebra

1. Solve each formula for the variable indicated.
a) $A=I w, ~ " w "$
b) $A=1 / 2$ bh, "h"
c) $g=a+w$, "a"
d) $P=s-e, " s$ "
e) $v=u+a t, \quad " u "$
f) $W=R+H t$ " t "
2. Solve for the variable indicated.
a) $d=v t+1 / 2 a t^{2}$, solve for "a"
b) $C=\frac{n E}{n r+R}$, solve for " $E$ "
c) $F=\frac{m n}{d^{2}}$ solve for " $n$ "
3. The formula for the circumference of a circle is $C=\pi d$, where $\pi=3.14$.
a) Solve the formula for d .
b) Canada's largest tree is a Douglas fir on Vancouver Island. Its circumference is 12.54 m . Use the formula for find the diameter of Canada's largest tree.
4. Density can be calculated by the formula $D=m / V$, where $D=$ density, $m=$ mass and $V=$ volume.
Find the mass of:
a) $55.2 \mathrm{~cm}^{3}$ of aluminum ( $\mathrm{d}_{\mathrm{Al}}=2.70 \mathrm{~g} / \mathrm{cm}^{3}$ )
b) $82.3 \mathrm{~cm}^{3}$ of mercury $\left(\mathrm{d}_{\mathrm{Hg}}=11.4 \mathrm{~g} / \mathrm{cm}^{3}\right)$.
5. The temperature below the Earth's surface, T , in degrees Celsius, is given by the formula: $T=10 d+20$, where $d$ is the depth in kilometers.
a) The deepest hole in the Earth is a test-drilling hole in Russia. At the bottom of the hole the temperature is expected to reach $170^{\prime} \mathrm{C}$. Estimate the depth of the drilling.
b) Estimate the depth of a mine in which the temperature is $420^{\circ} \mathrm{C}$.

# Unit 1: Introduction <br> 4 - Graphing 

| Graphing Rules <br> - Label the axis |  |  |
| :---: | :---: | :---: |
|  |  |  |
| $\qquad$ variable on the $x$-axis$\qquad$ variable on the $y$-axis |  |  |
|  |  |  |
| - Give the graph an $\qquad$ $\qquad$ . <br> - Scale each axis <br> > Use... <br> > Choose a scale that is... <br> $>$ <br> - Plot the points and draw a $\qquad$ |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |

## Direct Relationship

- Give the graph an $\qquad$
- Scale each axis
> Use...
> Choose a scale that is...
- Plot the points and draw a $\qquad$

## Finding Slope

To find the slope of a straight line:
Remember the equation of a line is:

- Choose...
- Choose them as...
- Use only...
Determine the slope and $y$ -
intercept of the graph shown and
write the equation describing this
line.

## Graphs of Wrath

Mr. Trask was interested in seeing the relationship between the variables velocity and time. He took three suped-up Hot Wheels cars and ran them through an extensive timing circuit. Here are three sets of data recorded in Mr. Trask's secret laboratory lair:

| Car 1 |  | Car 2 |  | Car 3 |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Time (s) | Velocity (m/s) | Time (s) | Velocity (m/s) | Time (s) | Velocity (m/s) |
| 0 | 0 | 0 | 0 | 0 | 0 |
| 5 | 6 | 5 | 10 | 5 | 3 |
| 10 | 12 | 10 | 17 | 10 | 7 |
| 15 | 16 | 15 | 25 | 15 | 11 |
| 20 | 23 | 20 | 33 | 20 | 14 |
| 25 | 30 | 25 | 42 | 25 | 19 |
| 30 | 34 | 30 | 51 | 30 | 22 |
| 35 | 40 | 35 | 67 | 35 | 25 |
| 40 | 46 | 40 | 73 | 40 | 30 |
| 45 | 55 | 45 | 81 | 45 | 34 |
| 50 | 62 | 50 | 89 | 50 | 39 |

Your challenge as Mr. Trask’s assistant/lackey is to provide a beautiful graph of all three sets of data on only ONE piece of graph paper (Mr. T's lab is a bit budget). Follow the steps like we did in our notes and you will be fine. You MUST have all data fit on your graphs, so you will have to make some tough decisions about your variable range on the axes. Also, use as much space as possible.
Mr. Trask will be looking to make sure your graph is readable and all your labeling and calculations are on the graph as well.

Questions (show all work on your graph paper):

1) Find:

Slope of the line for car 1
Slope of the line for car 2
Slope of the line for car 3
2) a. Write an equation for the line for car 1.
b. Use this equation to predict how fast car 1 will be traveling at $\mathrm{t}=90 \mathrm{~s}$.

Discussion:

1) Pretend car 2 has some really bad tires, which heat up and get sticky the longer the vehicle moves. As the tires get stickier, the car's acceleration decreases. What would you predict the graph of car 2 would look like? Sketch a graph.
2) Pretend that at $t=55 s$ the driver of car 3 sees an adorable marmot in the road and jams on the brakes, suddenly stopping. What would you predict the graph of car 3 would look like?
Sketch a graph.
